
Malecha's Auto Body Highlights Company Growth and Repair Standards

June 12, 2026

Faribault, MN - June 12, 2026 -
Malecha's Auto Body is highlighting its continued growth and commitment to manufacturer-aligned repair standards as the company serves vehicle owners throughout southern Minnesota from its Faribault and Waseca locations.

Founded in 2002 by William "Willy" Malecha, the company began as a one-man operation and has grown into a multi-location collision repair business serving drivers across the region. Today, Malecha's Auto Body provides a range of automotive repair and restoration services while emphasizing proper repair procedures, ongoing technician training, and customer support throughout the repair process.

According to the company, its approach has evolved alongside advancements in vehicle technology. Modern vehicles increasingly incorporate advanced materials, driver-assistance systems, and manufacturer-specific repair requirements that often require specialized equipment and training.

Malecha's Auto Body states that its facilities are equipped to perform a variety of repair procedures, including collision repair, paintless dent repair, refinishing, glass replacement, diagnostics, and ADAS calibration. The company also maintains OEM certifications from multiple vehicle manufacturers and holds I-CAR Gold Class recognition, reflecting ongoing investments in technician education and repair capabilities.

"Vehicles continue to become more complex every year, and repair procedures must evolve with them," said William "Willy" Malecha, founder of Malecha's Auto Body. "Our focus has always been on performing repairs correctly, supporting customers throughout the process, and maintaining standards that prioritize safety and quality."

In addition to its repair operations, the company works directly with insurance providers and assists customers through various stages of the claims process. Malecha's Auto Body notes that many vehicle owners encounter collision repairs only occasionally, making communication and transparency important aspects of the customer experience.

The company's Faribault facility serves as its flagship location, while its Waseca operation expands access to certified repair services for drivers throughout neighboring communities. Together, the two locations allow the company to support a broader customer base while maintaining its locally owned and operated business model.

According to the company, collision repair requirements continue changing as vehicle manufacturers introduce new materials, electronic systems, and structural designs. Many modern vehicles incorporate cameras, sensors, advanced driver-assistance systems, and manufacturer-specific repair procedures that may require additional planning, diagnostics, and calibration following an accident. Malecha's Auto Body states that reviewing manufacturer repair information remains an important part of developing repair strategies for today's vehicles.

The company also notes that repair planning often extends beyond correcting visible damage. Depending on the nature of a collision, technicians may need to evaluate structural components, alignment specifications, electronic systems, and safety-related features before repairs begin. Malecha's Auto Body says these evaluations help establish a clearer understanding of repair requirements and support consistency throughout the restoration process.

Malecha's Auto Body also publishes educational resources covering vehicle repair topics, warranty information, insurance considerations, paintless dent repair, and modern vehicle safety systems. The company says these resources are intended to help vehicle owners better understand the repair process and make informed decisions following an accident or vehicle damage.

As repair standards continue to evolve across the automotive industry, Malecha's Auto Body remains focused on combining technical repair expertise with customer support and long-term accountability. The company backs qualifying repair workmanship and paint services with a lifetime warranty and continues investing in equipment, training, and repair technologies designed to meet manufacturer requirements.

More information about the company is available through Malecha's Auto Body. Additional company updates are available on Malecha's Auto Body on Facebook.
