Grimes Paint & Body Expands Focus on Collision Repair Standards

Grimes Paint & Body Expands Focus on Collision Repair Standards

June 22, 2026

Forney, TX - June 22, 2026 -

Grimes Paint & Body announced an expanded focus on collision repair standards as modern vehicles continue incorporating advanced safety technologies, specialized materials, and manufacturer-specific repair requirements.

According to the company, collision repair has evolved significantly in recent years as vehicle manufacturers introduce increasingly sophisticated structural designs and integrated electronic systems. Following an accident, damage may extend beyond visible exterior panels and affect components that require specialized repair planning and inspection procedures.

Grimes Paint & Body provides collision repair services for vehicles ranging from minor accident damage to more extensive repairs involving multiple vehicle systems. The company states that collision repair begins with a comprehensive assessment intended to identify visible and hidden damage before repair recommendations are developed.

"Today's vehicles require a detailed approach to repair planning," said Edward Grimes, owner of Grimes Paint & Body. "Repair procedures often involve manufacturer information, inspections, and documentation that help guide the restoration process and support repair quality."

The company notes that collision repair may involve structural repairs, panel replacement, refinishing procedures, suspension inspections, glass replacement coordination, and quality-control processes depending on the extent of vehicle damage. Repair requirements vary based on vehicle construction, accident severity, and manufacturer recommendations.

The company states that repair planning plays an important role in determining the scope of repairs needed following an accident. Modern vehicles frequently incorporate advanced driver-assistance systems, sensors, cameras, and electronic components that may require evaluation after a collision. Even when damage appears limited to exterior panels, repair planning may include reviewing affected vehicle systems and manufacturer repair information to determine the appropriate repair approach.

Grimes Paint & Body notes that manufacturer repair procedures continue evolving alongside vehicle technology. Repair facilities increasingly rely on repair documentation, technical resources, and ongoing technician education to address changing vehicle designs, materials, and safety-related components that can influence repair recommendations.

The company also emphasizes the role of communication throughout the repair process. Grimes Paint & Body states that customers often have questions regarding supplemental damage findings, insurance approvals, repair timelines, replacement parts, and repair procedures. Maintaining communication throughout the repair process helps vehicle owners better understand repair progress, insurance-related developments, and any adjustments that may be necessary as repairs move forward.

As vehicle technology continues advancing, repair facilities face increasing demands related to technician education, repair equipment, and manufacturer repair information. The company states that maintaining structured repair processes remains important as vehicle designs and repair requirements continue evolving.

Grimes Paint & Body also highlights quality-control procedures throughout the repair process. According to the company, inspections may occur at multiple stages of repair work to verify repair accuracy, component fitment, refinishing consistency, and overall vehicle condition prior to delivery. These inspections are intended to help verify that repairs align with the established repair plan before the vehicle is returned to the customer.

The company continues serving vehicle owners who require assistance following accidents and collision-related damage. Through its collision repair services, Grimes Paint & Body aims to support

vehicle restoration, repair consistency, and customer confidence throughout the repair process.
